

NOONLIGHT

FORMERLY SAFETREK

To protect and comfort people so they can live freely

We live in a big, unpredictable world. You never know what will happen or when you will need to dial 911. With Noonlight, first responders are just a touch away!

Noonlight is a mobile platform built to handle emergency situations. An alarm can be initiated manually by the user or through automatic triggers such as a car crash. The app instantly connects to a dispatcher who can track the user's real-time location and send emergency personnel.

Log in at [medsensemembersonline.com/my-account/](https://www.medsensemembersonline.com/my-account/) for more information.

Users signal an emergency using a trigger button. The user can hold the button as long as they feel unsafe or tap it quickly, like a panic button, for instant help.

Noonlight accesses GPS location services to send your real-time location. Users can opt to release your location only when the app is open.

Certified dispatchers notify police of your exact location when the button is released. Users can enter a 4-digit pin within 10 seconds if they feel safe and the police response will be cancelled. Dispatchers will also contact you via text to check your status.

Integrates With:

- ✓ Alexa
- ✓ Google Home
- ✓ Nest Protect
- ✓ Lyft
- ✓ Uber
- ✓ Crash Detection
- ✓ Apple Watch
- ✓ Fitbit (Coming Soon)
- ✓ Wyze (Coming Soon)

And more!
