

Noonlight

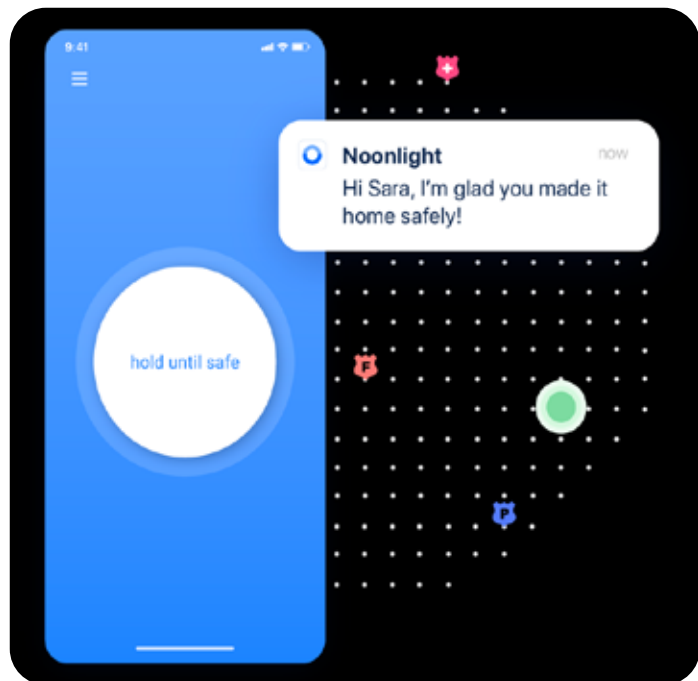

To protect and comfort people so they can live freely

We live in a big, unpredictable world. You never know what will happen or when you will need to dial 911. With Noonlight, first responders are just a touch away!

Noonlight is a mobile platform built to handle emergency situations. An alarm can be initiated manually by the user or through automatic triggers such as a car crash. The app instantly connects to a dispatcher who can track the user's real-time location and send emergency personnel.

Noonlight is America's No. 1 Safety App

- Silently summon help to your exact location with the tap of a button.
- Save details to your Timeline, like who, when, and where you're meeting, just in case anything happens.
- Add friends to your Safety Network so they can make sure you never go missing.
- Connect Noonlight to other apps and devices for smarter, faster help in an emergency.

How Noonlight's Safety Button Works

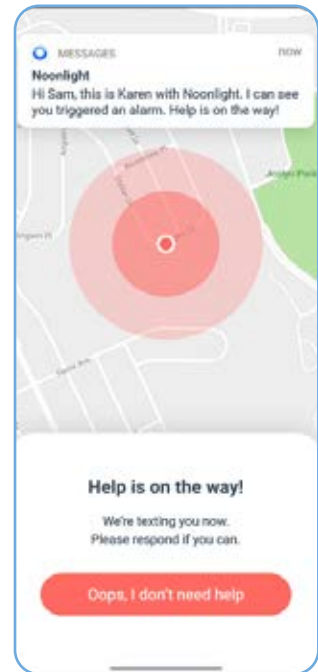

1

Feeling unsafe? Open Noonlight and hold the button.

2

Once you're safe, release the button and enter your 4-digit PIN.

3

In danger? Release the button and do not enter your PIN. We'll notify police with your exact location and emergency.

Integrates With:

- ✓ Alexa
- ✓ Google Home
- ✓ Next Protect
- ✓ Lyft
- ✓ Uber
- ✓ Crash Detection
- ✓ Apple Watch

And more!
